DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

2. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

3. Claims 1-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Devore et al., U.S. Patent No. 6,825,297 (hereinafter "Devore"). Devore teaches a catalyst system

comprising one or more bisarylimino pyridine iron catalyst cocatalyst comprising mixtures of alumoxanes and Lewis acid compounds. See Devore, col. 5, lines 20-50 and Examples 8, 9, 19. Devore further teaches a process polymerizing olefins using the catalyst system. See Devore, Example 19, Table 1. Devore differs from the present invention in that the present invention teaches a specific second co-catalyst, ZnR_2 . The Examiner contends the second cocatalyst of the present invention is a Lewis acid that falls with the generic teachings of Devore.

4. The basic requirements of prima facie case of obvious are: (1) there must be some suggestion or motivation, either in the reference themselves or in the knowledge generally available to one of ordinary skill in the art, to modify the reference or to combine reference teachings; (2) there must be a reasonable expectation of success; (3) the prior art reference (or references when combined) must teach or suggest all the claim limitations. See MPEP 2143. "There are three possible sources for a motivation to combine references: the nature of the problem to be solved, the teachings of the prior art, and the knowledge of persons of ordinary skill in the art." See In re Rouffet, 149 F.3d 1350, 1357, 47 USPQ2d 1453, 1457-58 (Fed. Cir. 1998). Although Devore does not disclose in the working

examples or specification the ZnR_2 cocatalyst of the present invention, based on the specification as a whole a polymer chemist of ordinary skill in the art would be motivated to modify Devore by preparing a catalyst system within the teachings of Devore. Such modification would be obvious because one would have a reasonable expectation of success that Lewis acids as taught by Devore would be similarly useful and applicable to the catalyst system as taught in the present invention. Therefore, claims 1-21 are deemed as being unpatentable over Devore.
